

Faculty Development

INVEST IN YOUR FACULTY WITH

ASSESSMENT-BASED DEVELOPMENT

Faculty Hold the Key To Academic Quality

Teaching and learning outcomes are at the core of academic excellence – and faced with increased competition and regulatory requirements, attracting, developing and retaining high-quality faculty members is more important than ever. Through a partnership with Franklin University, higher education institutions gain insight into best practices in teaching and assessment, as well as the resources to develop faculty and improve the academic quality of programs.

Provide A Clear Path Toward Teaching Excellence

As part of our unique approach, we'll discuss your institutional goals and create a support plan based on your needs. You'll have access to Franklin's faculty development curriculum, which includes best-in-class courses in instructional practices, observation, coaching, assessment and feedback, and techniques to enhance student learning. Through formal assessment and training options like seminars, webinars and online courses, your faculty will have the opportunity to demonstrate and improve the quality of their teaching and learning effectiveness. Each course is embedded with assessment tools that give participants customized continued development based on specific areas of need. This data-driven structure provides improved assessment from training through actual classroom implementation.

Maximize the Impact of Your Faculty

Franklin University has launched development courses domestically and globally, as well as partnered with global institutions, to successfully assess and improve faculty development.

As part of the University's faculty development offerings, we can support your institution and your faculty in developing knowledge and expertise through proven, effective practices that can be implemented immediately.

FRANKLIN UNIVERSITY'S FACULTY DEVELOPMENT ENABLES YOU TO:

- Support faculty development and enhance organizational results through formal faculty training options including assessment, program review and building leadership competencies
- Improve student success through guided learning outcomes mapping
- Increase retention through teaching and learning development analytics
- Use training and analytics to enhance instructional effectiveness
